Height: 2 inches

Spread: 3 feet

Sunlight: ○ ◐

Hardiness Zone: 8b

Other Names: String Of Beads

Description:

An interesting and unusual trailing succulent with spherical green foliage strung along the branches; a dramatic accent in rock gardens, or spilling over the edges of containers and hanging baskets

Ornamental Features

String Of Pearls' attractive succulent round leaves remain green in color throughout the year on a plant with a trailing habit of growth.

Landscape Attributes

String Of Pearls is an herbaceous evergreen perennial with a trailing habit of growth, eventually spilling over the edges of hanging baskets and containers. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and usually looks its best without pruning, although it will tolerate pruning. It has no significant negative characteristics.

String Of Pearls is recommended for the following landscape applications;

- Accent
- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting
- Hanging Baskets

Planting & Growing

String Of Pearls will grow to be only 2 inches tall at maturity, with a spread of 3 feet. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America.

String Of Pearls is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. Because of its trailing habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.

This is a tender plant that may require additional winter protection in our area; contact the store for more information.
