Compact P.J.M. Rhododendron

Rhododendron 'P.J.M. Compact'

Height: 4 feet

Spread: 3 feet

Sunlight: ☉ ●

Hardiness Zone: 3

Group/Class: P.J.M. Series

Description:

A dwarf broadleaf evergreen shrub featuring pretty purple-pink flowers in spring and a compact habit, very hardy, interesting fall coloration; absolutely must have well-drained, highly acidic and organic soil, use plenty of peat moss when planting

Ornamental Features

Compact P.J.M. Rhododendron is clothed in stunning clusters of lightly-scented lavender trumpet-shaped flowers with rose overtones at the ends of the branches in mid spring, which emerge from distinctive fuchsia flower buds. It has green deciduous foliage. The narrow leaves turn an outstanding purple in the fall.

Landscape Attributes

Compact P.J.M. Rhododendron is an open multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This shrub will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Compact P.J.M. Rhododendron is recommended for the following landscape applications;

Planting & Growing

Compact P.J.M. Rhododendron will grow to be about 4 feet tall at maturity, with a spread of 3 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
