

Lily Looks™ Tiny Skyline Asiatic Lily
Lilium 'Tiny Skyline'

Height: 16 inches

Spread: 14 inches

Spacing: 10 inches

Sunlight: ☉

Hardiness Zone: 3b

Group/Class: Lily Looks Series

Description:

This lovely variety produces unusually large bright orange blooms with a coppery hue; an excellent choice for containers, or massed in borders; allow to die back in fall before clearing and divide every 3-4 years

Ornamental Features

Lily Looks Tiny Skyline Asiatic Lily features bold orange trumpet-shaped flowers with coppery-bronze streaks at the ends of the stems in early summer. The flowers are excellent for cutting. Its narrow leaves remain green in color throughout the season.

Landscape Attributes

Lily Looks Tiny Skyline Asiatic Lily is an herbaceous perennial with a rigidly upright and towering form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Disease

Lily Looks Tiny Skyline Asiatic Lily is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

Planting & Growing

Lily Looks Tiny Skyline Asiatic Lily will grow to be about 14 inches tall at maturity, with a spread of 14 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
