

Miller City Possumhaw Holly

Ilex decidua 'Miller City'

Height: 20 feet

Spread: 25 feet

Sunlight: ☐ ☒

Hardiness Zone: 4b

Other Names: Possum Haw, Deciduous Holly, Bearberry

Description:

A versatile large shrub or small tree with showy orange-red berries throughout winter, requires a male pollinator to produce the berries; does best in moist acidic soils, good for problem areas; excellent when massed

Ornamental Features

Miller City Possumhaw Holly is primarily grown for its highly ornamental fruit. It features an abundance of magnificent orange berries from mid fall to late winter. It has dark green deciduous foliage. The glossy pointy leaves do not develop any appreciable fall color.

Landscape Attributes

Miller City Possumhaw Holly is a multi-stemmed deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds to your yard. It has no significant negative characteristics.

Miller City Possumhaw Holly is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Naturalizing And Woodland Gardens

Planting & Growing

Miller City Possumhaw Holly will grow to be about 20 feet tall at maturity, with a spread of 25 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more. This is a female variety of the species which requires a male selection of the same species growing nearby in order to set fruit.

This tree does best in full sun to partial shade. It prefers to grow in moist to wet soil, and will even tolerate some standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
