

Brushstrokes Persicaria

Persicaria 'Brushstrokes'

Height: 3 feet

Spread: 24 inches

Spacing: 20 inches

Sunlight: ☐ ☒

Hardiness Zone: 4a

Other Names: Knotweed, Polygonum

Description:

Grown for its interesting foliage that is luminous light green with unusual V-shaped burgundy markings; a more upright growth habit, and does not sprawl; blooms in very late fall, so does not tend to re-seed; great for borders and containers

Ornamental Features

Brushstrokes Persicaria's attractive pointy leaves remain light green in color with prominent burgundy stripes throughout the season on a plant with an upright spreading habit of growth.

Landscape Attributes

Brushstrokes Persicaria is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It has no significant negative characteristics.

Brushstrokes Persicaria is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover
- Naturalizing And Woodland Gardens

Planting & Growing

Brushstrokes Persicaria will grow to be about 32 inches tall at maturity, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 20 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
