

## Wratislaviensis Linden

*Tilia x europaea 'Wratislaviensis'*

Height: 45 feet

Spread: 30 feet

Sunlight: 

Hardiness Zone: 4a

Other Names: Warsaw Linden, European Linden, European Lime

### Description:

An interesting shade tree for larger yards featuring bright yellow emerging foliage that transitions to green, giving a halo effect; fragrant yellow flowers in early summer; a tidy, generally adaptable tree

### Ornamental Features

Wratislaviensis Linden has attractive chartreuse-variegated green foliage which emerges yellow in spring on a tree with an oval habit of growth. The heart-shaped leaves are highly ornamental and turn yellow in fall. It features subtle clusters of fragrant yellow flowers with tan bracts hanging below the branches in early summer. The rough gray bark and antique red branches add an interesting dimension to the landscape.

### Landscape Attributes

Wratislaviensis Linden is a deciduous tree with a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Wratislaviensis Linden is recommended for the following landscape applications;

- Shade

**Planting & Growing**

Wratislaviensis Linden will grow to be about 45 feet tall at maturity, with a spread of 30 feet. It has a high canopy with a typical clearance of 5 feet from the ground, and should not be planted underneath power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 70 years or more.

This tree should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
