

Chinese Sweetspire

Itea chinensis

Height: 10 feet

Spread: 6 feet

Sunlight: ☐ ☒

Hardiness Zone: 7a

Description:

A multi-branched, low arching shrub featuring pendulous, draping racemes of small white flowers in spring; spreads to form colonies; not commonly found in gardens but definitely worthy; excellent for naturalizing or screening

Ornamental Features

Chinese Sweetspire is draped in stunning racemes of fragrant white flowers along the branches from mid to late spring. It has dark green evergreen foliage which emerges chartreuse in spring. The glossy oval leaves remain dark green throughout the winter. The smooth gray bark adds an interesting dimension to the landscape.

Landscape Attributes

Chinese Sweetspire is a dense multi-stemmed evergreen shrub with a shapely form and gracefully arching branches. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Suckering

Chinese Sweetspire is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Naturalizing And Woodland Gardens

Planting & Growing

Chinese Sweetspire will grow to be about 10 feet tall at maturity, with a spread of 6 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It is quite adaptable, preferring to grow in average to wet conditions, and will even tolerate some standing water. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America.
