

Ilima
Sida fallax

Height: 8 feet

Spread: 8 feet

Sunlight: ☐ ☒

Hardiness Zone: 10a

Other Names: Golden Mallow

Description:

Individual plants vary greatly in height, leaf size, or flower color; heart shaped foliage is bright green with gray-green undersides; yellow to orangish-yellow flowers appear year round; Hawaiian native that is very vigorous and adaptable

Ornamental Features

Ilima features showy clusters of yellow cup-shaped flowers with orange overtones at the ends of the branches from early winter to late fall. It has bluish-green foliage with grayish green undersides. The serrated heart-shaped leaves remain bluish-green throughout the winter.

Landscape Attributes

Ilima is a dense multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. It is a good choice for attracting bees, butterflies and hummingbirds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading
- Self-Seeding

Ilima is recommended for the following landscape applications;

- Container Planting

Planting & Growing

Illica will grow to be about 8 feet tall at maturity, with a spread of 8 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years.

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. This plant does not require much in the way of fertilizing once established. It is not particular as to soil pH, but grows best in sandy soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This species is not originally from North America.

Illica makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
