

Kiowa Japanese Crapemyrtle

Lagerstroemia fauriei 'Kiowa'

Height: 25 feet

Spread: 20 feet

Sunlight: ☐ ☒

Hardiness Zone: 5b

Other Names: Crape Myrtle, Crepe Myrtle

Description:

This ornamental beauty adorns large, long-lasting panicles of white flowers that are delicately fragrant; its decorative exfoliating copper bark reveals layers of color underneath; shows good resistance to powdery mildew; heat and drought tolerance

Ornamental Features

Kiowa Japanese Crapemyrtle is blanketed in stunning panicles of white frilly flowers at the ends of the branches from early to late summer. It has attractive dark green deciduous foliage which emerges coppery-bronze in spring. The oval leaves are highly ornamental and turn orange in fall.

Landscape Attributes

Kiowa Japanese Crapemyrtle is a dense multi-stemmed deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Kiowa Japanese Crapemyrtle is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Kiowa Japanese Crapemyrtle will grow to be about 25 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 40 years or more.

This tree does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
