Description:

This mildly fragrant variety produces gorgeous apricot-peach colored blooms above the rich green foliage; blooms mature to a silvery-peach and are perfect for cutting; excellent disease resistance

Ornamental Features

Pearlie Mae Rose features showy lightly-scented peach flowers with gold eyes at the ends of the branches from early summer to mid fall. The flowers are excellent for cutting. It has green deciduous foliage. The oval compound leaves do not develop any appreciable fall color.

Landscape Attributes

Pearlie Mae Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Pearlie Mae Rose is recommended for the following landscape applications;

  - Accent
  - Mass Planting
  - Hedges/Screening
  - General Garden Use

Planting & Growing

Pearlie Mae Rose will grow to be about 5 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
