Description:

This beautifully fine textured variety produces luminous green foliage, and bright yellow button flowers in summer; traditionally used as a low hedge in herb gardens; perfect accent in the rock garden or borders

Ornamental Features

Green Lavender Cotton features showy spikes of lightly-scented yellow button flowers at the ends of the branches from early to mid summer. The flowers are excellent for cutting. It has attractive green evergreen foliage. The fragrant narrow leaves are highly ornamental and remain green throughout the winter.

Landscape Attributes

Green Lavender Cotton is a dense multi-stemmed evergreen shrub with a mounded form. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This shrub will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Green Lavender Cotton is recommended for the following landscape applications;

Planting & Growing

Green Lavender Cotton will grow to be about 24 inches tall at maturity, with a spread of 24 inches. It has a low canopy. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years.

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This species is not originally from North America.

Green Lavender Cotton makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. It can be used either as 'filler' or as a 'thriller' in the 'spiller-thriller-filler' container combination, depending on the height and form of the other plants used in the container planting. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
