Hercules Calla Lily

Zantedeschia 'Hercules'

Plant Height: 4 feet

Flower Height: 7 feet

Spread: 4 feet

Spacing: 3 feet

Sunlight: ○ ◐

Hardiness Zone: 7

Other Names: Lily of the Nile, Easter Lily, Arum Lily

Description:

This huge form of the species presents a mound of enormous green leaves that are spotted in white; in summer it sends up towering, tall flower stalks with huge blooms on top; a breathtaking centerpiece for a large garden or spectacular along borders

Ornamental Features

Hercules Calla Lily features bold white trumpet-shaped flowers with yellow throats rising above the foliage from early summer to early fall. The flowers are excellent for cutting. Its attractive enormous glossy heart-shaped leaves remain dark green in color with distinctive white spots throughout the season.

Landscape Attributes

Hercules Calla Lily is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its wonderfully bold, coarse texture can be very effective in a balanced garden composition.

This is a high maintenance plant that will require regular care and upkeep, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Hercules Calla Lily is recommended for the following landscape applications;

Planting & Growing

Hercules Calla Lily will grow to be about 4 feet tall at maturity extending to 7 feet tall with the flowers, with a spread of 4 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 3 feet apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Hercules Calla Lily is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
