Height: 22 inches

Spread: 3 feet

Spacing: 30 inches

Sunlight: ◐ ●

Hardiness Zone: 3

Other Names: Plantain Lily, Funkia

**Description:**

A deep green glossy leaf center with pure white margins; leaf is heart shaped, deeply ribbed and corrugated; spikes of pale lavender flowers in late spring to early summer; a stunning specimen in the garden or border

**Ornamental Features**

Orion's Belt Hosta features dainty spikes of lavender tubular flowers rising above the foliage from late spring to early summer. Its attractive glossy heart-shaped leaves remain dark green in color with distinctive white edges throughout the season.

**Landscape Attributes**

Orion's Belt Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Orion's Belt Hosta is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

**Planting & Growing**

Orion's Belt Hosta will grow to be about 18 inches tall at maturity, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 30 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
