**Description:**

A medium green leaf center with rippled chartreuse margins; leaf is large and heart shaped, lightly wavy, and corrugated; spikes of pale lavender flowers in mid to late summer; a stunning specimen in the garden or border

**Ornamental Features**

Sum It Up Hosta features dainty spikes of lavender tubular flowers rising above the foliage from mid to late summer. Its attractive large glossy heart-shaped leaves remain green in color with distinctive chartreuse edges and tinges of yellow throughout the season.

**Landscape Attributes**

Sum It Up Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Sum It Up Hosta is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Groundcover

**Planting & Growing**

Sum It Up Hosta will grow to be about 32 inches tall at maturity extending to 4 feet tall with the flowers, with a spread of 4 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 4 feet apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
