Gold Dust Sweet Gum

Liquidambar styraciflua 'Goduzam'

Height: 50 feet

Spread: 30 feet

Sunlight: ○

Hardiness Zone: 4

Other Names: American Sweet Gum

Description:

A tall, spreading shade tree with interesting green leaves, and gold variegation that starts out soft pink; somewhat particular about growing conditions; this variety produces less messy fruit, use where this will not be a problem

Ornamental Features

Gold Dust Sweet Gum has gold-variegated forest green foliage with hints of shell pink on a tree with an oval habit of growth. The lobed palmate leaves turn an outstanding crimson in the fall. However, the fruit can be messy in the landscape and may require occasional clean-up.

Landscape Attributes

Gold Dust Sweet Gum is a deciduous tree with a strong central leader and a shapely oval form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This tree will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy

Gold Dust Sweet Gum is recommended for the following landscape applications;

- Accent
- Shade

Planting & Growing

Gold Dust Sweet Gum will grow to be about 50 feet tall at maturity, with a spread of 30 feet. It has a high canopy of foliage that sits well above the ground, and should not be planted underneath power lines. As it matures, the lower branches of this tree can be strategically removed to create a high enough canopy to support unobstructed human traffic underneath. It grows at a fast rate, and under ideal conditions can be expected to live for 80 years or more.

This tree should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
