Height: 25 feet

Spread: 25 feet

Sunlight: ○ ◐

Hardiness Zone: 4

Other Names: Variegated Bean Tree

Description:

A medium sized shade tree with enormous varigated leaves resulting in a very coarse texture, use where this is required; very showy white flowers with tiny purple spots in early summer, long narrow fruits in fall, extremely adaptable

Ornamental Features

Variegated Catalpa features showy panicles of fragrant white orchid-like flowers with yellow throats and purple spots rising above the foliage in mid summer. It has creamy white-variegated green foliage with hints of olive green. The enormous heart-shaped leaves do not develop any appreciable fall color. The fruits are showy brown pods displayed from mid summer to late winter. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

Landscape Attributes

Variegated Catalpa is a deciduous tree with a more or less rounded form. Its strikingly bold and coarse texture can be very effective in a balanced landscape composition.

This tree will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy

Variegated Catalpa is recommended for the following landscape applications;

- Accent
- Shade

Planting & Growing

Variegated Catalpa will grow to be about 25 feet tall at maturity, with a spread of 25 feet. It has a high canopy with a typical clearance of 5 feet from the ground, and should not be planted underneath power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 80 years or more.

This tree does best in full sun to partial shade. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species.
