Height: 8 inches

Spread: 24 inches

Spacing: 18 inches

Sunlight: ○ ◐

Hardiness Zone: 5

Description:

A vigorous groundcover, yet not overly aggressive, with uniquely paired green leaves streaked in yellow all season; attractive clusters of gold flowers throughout the summer; a colorful groundcover for the garden or border areas

Ornamental Features

Golden Globes Loosestrife is smothered in stunning clusters of lightly-scented gold cup-shaped flowers with cherry red eyes along the stems from late spring to mid summer. Its attractive glossy round leaves remain green in color with showy chartreuse variegation throughout the season.

Landscape Attributes

Golden Globes Loosestrife is a dense spreading perennial with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This plant will require occasional maintenance and upkeep, and should not require much pruning, except when necessary, such as to remove dieback. It is a good choice for attracting bees to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Golden Globes Loosestrife is recommended for the following landscape applications;

- Border Edging
- Groundcover
- Container Planting
- Bog Gardens

Planting & Growing

Golden Globes Loosestrife will grow to be about 8 inches tall at maturity, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is quite adaptable, prefering to grow in average to wet conditions, and will even tolerate some standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Golden Globes Loosestrife is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
