Height: 15 feet

Spread: 15 feet

Sunlight:

Hardiness Zone: 4

Other Names: Common Pear

Description:

A compact fruit tree which produces high quality bright yellow pears with sweet flesh in fall; very showy white flowers in spring and an upright spreading habit, very ornamental; needs a pollinator, fallen fruit can be messy, resistant to fireblight

Edible Qualities

Aurora Pear is a small tree that is typically grown for its edible qualities. It produces yellow oblong pears (which are botanically known as 'pomes') with tan overtones and white flesh which are usually ready for picking in early fall. The pears have a sweet taste and a juicy texture.

The pears are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Juice-Making
- Canning

Features & Attributes

Aurora Pear is bathed in stunning clusters of white flowers with gold eyes and purple anthers along the branches in early spring. It has forest green deciduous foliage. The glossy pointy leaves turn an outstanding deep purple in the fall. The fruits are showy yellow pears with tan overtones, which are carried in abundance in early fall. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a dense deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Disease

Aside from its primary use as an edible, Aurora Pear is sutiable for the following landscape applications;

- Accent
- Shade
- Orchard/Edible Landscaping

Planting & Growing

Aurora Pear will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 50 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
