Marc Anthony® Lily Turf

Liriope muscari 'Marant'

Height: 16 inches

Spread: 24 inches

Sunlight: ◐ ●

Hardiness Zone: 4

Other Names: Border Grass, Lilyturf

Description:

A tufted grass like variety that features a clump of arching, glossy, bright green leaves with yellow edges; a beautiful display of lovely lavender pink flower spikes; it is best as an edging plant or massed as a groundcover; less variegation in shade

Ornamental Features

Marc Anthony Lily Turf features dainty spikes of lavender flowers with pink overtones rising above the foliage in late summer. Its attractive glossy grassy leaves remain green in color with distinctive yellow edges throughout the season. It features an abundance of magnificent black berries in early fall.

Landscape Attributes

Marc Anthony Lily Turf is a dense herbaceous perennial with a ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It has no significant negative characteristics.

Marc Anthony Lily Turf is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Marc Anthony Lily Turf will grow to be about 14 inches tall at maturity, with a spread of 24 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
