Height: 3 feet

Spread: 24 inches

Sunlight: ○ ◐

Hardiness Zone: 8

Other Names: Ginger Lily, Garland Lily

Description:

An interesting and fairly hardy variety with very narrow, slightly glaucous foliage, and stunning salmon-orange flower spikes that bloom early and persist well; great as a container plant, or massed along borders; benefits from some shelter and rich soil

Ornamental Features

Narrow Leaf Ginger features showy spikes of lightly-scented salmon flowers rising above the foliage from late summer to early fall. Its narrow leaves remain bluish-green in color throughout the season.

Landscape Attributes

Narrow Leaf Ginger is an herbaceous perennial with a rigidly upright and towering form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

Narrow Leaf Ginger is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Narrow Leaf Ginger will grow to be about 30 inches tall at maturity, with a spread of 24 inches. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Narrow Leaf Ginger is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
