Plant Height: 8 inches

Flower Height: 12 inches

Spread: 10 inches

Spacing: 8 inches

Sunlight:

Hardiness Zone: 7

Other Names: Lily of the Nile, Easter Lily, Arum Lily

Description:

A miniature variety with a high flower count; warm green, narrow, well shaped foliage embraces lovely ivory blooms with butter yellow centers; perfect for small containers

Ornamental Features

Intimate Ivory Calla Lily features bold creamy white trumpet-shaped flowers with buttery yellow throats rising above the foliage from late spring to early fall. The flowers are excellent for cutting. Its attractive glossy pointy leaves remain dark green in color throughout the season.

Landscape Attributes

Intimate Ivory Calla Lily is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its wonderfully bold, coarse texture can be very effective in a balanced garden composition.

This is a high maintenance plant that will require regular care and upkeep, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Intimate Ivory Calla Lily is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Intimate Ivory Calla Lily will grow to be about 8 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 10 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 8 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Intimate Ivory Calla Lily is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
