Hardiness Zone: 3

Other Names: European Bird Cherry, Common Bird Cherry

Description:

An interesting medium sized upright accent tree featuring long racemes of pink flowers in spring followed by tiny bitter fruit, attractive to birds; leaves emerge bronze, very showy for a long period; best in full sun, can be susceptible to black-knot

Ornamental Features

Colorata Mayday features showy racemes of fragrant pink flowers hanging below the branches in mid spring before the leaves. It has attractive deep purple-tipped dark green foliage which emerges burgundy in spring. The pointy leaves are highly ornamental but do not develop any appreciable fall color. The black fruits are held in clusters in late summer. The smooth brown bark and purple branches are extremely showy and add significant winter interest.

Planting & Growing

Colorata Mayday will grow to be about 30 feet tall at maturity, with a spread of 25 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and should not be planted underneath power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This tree should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
