Height: 4 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 3

Other Names: Pfitzer Juniper

Description:

A beautiful color accent landscape evergreen; wide spreading with arching branches, new growth is slightly droopy and beautiful golden color, soft texture; a superb groundcover or massing plant for color, develops great character when mature

Ornamental Features

Gold Plume Juniper is a dwarf conifer which is primarily valued in the landscape or garden for its cascading habit of growth. It has attractive chartreuse evergreen foliage which emerges yellow in spring. The scale-like sprays of foliage are highly ornamental and turn lime green in the fall, which persists throughout the winter.

Landscape Attributes

Gold Plume Juniper is a multi-stemmed evergreen shrub with a shapely form and gracefully arching branches. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Gold Plume Juniper is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Gold Plume Juniper will grow to be about 4 feet tall at maturity, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
