Height: 6 feet

Spread: 4 feet

Sunlight:

Hardiness Zone: 8

Description:

A showy variety of fountain grass used as a focal point in the garden or containers; an upright clump of deep purple-burgundy leaves, blushed with sea-green, bearing striking black flower plumes in late summer; may be treated as an annual

Ornamental Features

Black Stockings Fountain Grass has masses of beautiful plumes of black flowers rising above the foliage from late summer to mid fall, which are most effective when planted in groupings. Its attractive grassy leaves emerge purple in spring, turning burgundy in color with showy bluish-green variegation throughout the season.

Landscape Attributes

Black Stockings Fountain Grass is an herbaceous perennial grass with a shapely form and gracefully arching stems. Its wonderfully bold, coarse texture can be very effective in a balanced garden composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Black Stockings Fountain Grass is recommended for the following landscape applications;

- Accent
- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Planting & Growing

Black Stockings Fountain Grass will grow to be about 5 feet tall at maturity, with a spread of 4 feet. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Black Stockings Fountain Grass is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
