Height: 8 feet

Spread: 5 feet

Sunlight: ○

Hardiness Zone: 4

Other Names: Pinus leucodermis, Serbian Pine

Description:

Long dark-green needles make this great as a small feature tree in home landscapes; a slow growing, oval to conical variety effective for screening or as an accent; a dense grower with upright branching

Ornamental Features

Gnome Bosnian Pine is a dwarf conifer which is primarily valued in the landscape or garden for its decidedly oval form. It has dark green evergreen foliage. The large needles remain dark green throughout the winter. The rough brown bark and silver branches add an interesting dimension to the landscape.

Landscape Attributes

Gnome Bosnian Pine is a dense multi-stemmed evergreen shrub with a shapely oval form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Gnome Bosnian Pine is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Gnome Bosnian Pine will grow to be about 8 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 60 years or more.

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type, but has a definite preference for acidic soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
