Height: 10 feet

Spread: 6 feet

Sunlight: ○ ◐

Hardiness Zone: 3

Other Names: Scots Pine

Description:

A compact, conical evergreen garden shrub presenting bright yellow-gold needles with green bases; slow growing; ideal for detail use in the landscape or for screening

Ornamental Features

Wolting's Gold Scotch Pine is a dwarf conifer which is primarily valued in the landscape or garden for its distinctively pyramidal habit of growth. It has attractive yellow-tipped light green foliage which emerges yellow in spring. The needles are highly ornamental and remain light green throughout the winter.

Landscape Attributes

Wolting's Gold Scotch Pine is a dense multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Wolting's Gold Scotch Pine is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Wolting's Gold Scotch Pine will grow to be about 10 feet tall at maturity, with a spread of 6 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
