Pink Rockrose

Cistus x skanbergii

Height: 4 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 7

Other Names: Gum Rockrose, Rock Rose

Description:

Clusters of pretty pink flowers with gold centers cover the fuzzy-textured green foliage in spring; a great border or rock garden plant; tolerant of poor, dry soils, hot garden locations and salt spray

Ornamental Features

Pink Rockrose is smothered in stunning pink round flowers with gold eyes at the ends of the branches from mid spring to early summer. It has attractive emerald green foliage with grayish green undersides. The fuzzy narrow leaves are highly ornamental and remain emerald green throughout the winter.

Landscape Attributes

Pink Rockrose is a dense multi-stemmed evergreen shrub with a mounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Pink Rockrose is recommended for the following landscape applications;

Planting & Growing

Pink Rockrose will grow to be about 4 feet tall at maturity, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years.

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid.

Pink Rockrose makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
