Height: 14 inches

Spread: 12 inches

Spacing: 8 inches

Sunlight:

Hardiness Zone: 4

Other Names: Nyewood Cream, Border Pinks, Cheddar Pinks

Description:

This beautiful fragrant variety has an intense, sweet aroma; lovely cream flowers blushed in pale pink; great for borders, annual beds, and containers

Ornamental Features

Nyewoods Cream Pinks is smothered in stunning fragrant creamy white frilly flowers with shell pink overtones at the ends of the stems from mid spring to early fall, which emerge from distinctive crimson flower buds. The flowers are excellent for cutting. Its attractive narrow leaves remain green in color throughout the year.

Landscape Attributes

Nyewoods Cream Pinks is an herbaceous evergreen perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Nyewoods Cream Pinks is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Nyewoods Cream Pinks will grow to be about 12 inches tall at maturity, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 8 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Nyewoods Cream Pinks is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
