Colorita® Fabiana® Alstroemeria

Alstroemeria 'Zaprifabi'

Height: 12 inches

Spread: 24 inches

Spacing: 18 inches

Sunlight: ○ ◐

Hardiness Zone: 7

Other Names: Peruvian Lily

Description:

This beautiful and intriguing variety presents stunning creamy-yellow blooms with buttery throats and dramatic burgundy streaks; crisp green foliage with white ribbon edges adds great interest; blooms last well as cut flowers

Ornamental Features

Colorita Fabiana Alstroemeria features showy bracted yellow trumpet-shaped flowers with creamy white overtones, buttery yellow throats and burgundy stripes at the ends of the stems from early summer to mid fall. The flowers are excellent for cutting. Its attractive twisted pointy leaves remain forest green in color with distinctive white edges throughout the season.

Landscape Attributes

Colorita Fabiana Alstroemeria is an herbaceous perennial with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant. Trim off the flower heads after they fade and die to encourage more blooms late into the season. It is a good choice for attracting bees, butterflies and hummingbirds to your yard. It has no significant negative characteristics.

Colorita Fabiana Alstroemeria is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Colorita Fabiana Alstroemeria will grow to be about 10 inches tall at maturity, with a spread of 24 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider covering it with a thick layer of mulch in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.

Colorita Fabiana Alstroemeria is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
