Rancocas Blueberry

Vaccinium corymbosum 'Rancocas'

Height: 5 feet

Spread: 4 feet

Sunlight: ○ ◐

Hardiness Zone: 3

Group/Class: Highbush Blueberry

Description:

A vigorous selection bearing medium sized, tangy fruit in early to mid season; pretty white bell-shaped flowers; bushy, upright, and fast growing; blueberries need highly acidic soil, perfect drainage and mulch, plant with peat moss

Edible Qualities

Rancocas Blueberry is a medium-sized shrub that is commonly grown for its edible qualities. It produces clusters of blue round berries which are usually ready for picking from early to mid summer. The berries have a tangy taste and a juicy texture.

The berries are most often used in the following ways:

- Cooking
- Baking
- Preserves
- Sauces

Features & Attributes

Rancocas Blueberry features dainty clusters of white bell-shaped flowers hanging below the branches in mid spring. It has green deciduous foliage. The glossy oval leaves turn yellow and red in fall. It features an abundance of magnificent blue berries in early summer. The smooth brick red bark adds an interesting dimension to the landscape.

This is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a relatively low maintenance plant, and usually looks its best without pruning, although it will tolerate pruning. It is a good choice for attracting birds to your yard. It has no significant negative characteristics.

Aside from its primary use as an edible, Rancocas Blueberry is sutiable for the following landscape applications;

- Orchard/Edible Landscaping

Planting & Growing

Rancocas Blueberry will grow to be about 5 feet tall at maturity, with a spread of 4 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years. This variety requires a different selection of the same species growing nearby in order to set fruit.

This shrub is typically grown in a designated area of the yard because of its mature size and spread. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is very fussy about its soil conditions and must have sandy, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
