Lumina Chinese Evergreen

Aglaonema 'Lumina'

Height: 3 feet

Spread: 3 feet

Sunlight: ◐ ●

Hardiness Zone: 10

Description:

A very popular container plant that is very easy to grow; survives poor lighting and low ventilation; chartreuse leaves edged, veined, and spotted in green; only planted outdoors in the warmest areas

Ornamental Features

Lumina Chinese Evergreen's attractive pointy leaves remain chartreuse in color with showy green variegation and tinges of creamy white throughout the season on a plant with an upright spreading habit of growth.

Landscape Attributes

Lumina Chinese Evergreen is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and may require the occasional pruning to look its best. It has no significant negative characteristics.

Lumina Chinese Evergreen is recommended for the following landscape applications;

Planting & Growing

Lumina Chinese Evergreen will grow to be about 3 feet tall at maturity, with a spread of 3 feet. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
