Violet Profusion Meadow Sage

Salvia nemorosa 'Violet Profusion'

Height: 16 inches

Spread: 20 inches

Spacing: 18 inches

Sunlight:

Hardiness Zone: 3

Other Names: Perennial Salvia

Description:

A bushy variety producing a profusion of long lasting violet-blue flower spikes with rosy purple calyxes, on a perfectly rounded plant; cut back after flowering to promote re-bloom; somewhat drought tolerant; excellent for the sunny border or containers

Ornamental Features

Violet Profusion Meadow Sage has masses of beautiful spikes of violet flowers with blue overtones and purple calyces rising above the foliage from late spring to late summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its fragrant narrow leaves remain grayish green in color throughout the season.

Landscape Attributes

Violet Profusion Meadow Sage is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Violet Profusion Meadow Sage is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Violet Profusion Meadow Sage will grow to be about 14 inches tall at maturity, with a spread of 20 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 18 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Violet Profusion Meadow Sage is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
