Blue Leap Agapanthus

Agapanthus 'Blue Leap'

Plant Height: 18 inches

Flower Height: 3 feet

Spread: 24 inches

Sunlight: ○ ◐

Hardiness Zone: 6

Other Names: Lily of the Nile, African Lily

Description:

This hardy selection produces a mound of luxurious narrow green foliage; rich blue flowers from violet buds, from late spring to early fall, on very sturdy stems; a perfect accent plant in the garden or massed along borders; grows taller in mild climates

Ornamental Features

Blue Leap Agapanthus features bold clusters of sky blue trumpet-shaped flowers with royal blue stripes rising above the foliage from late spring to early fall, which emerge from distinctive violet flower buds. The flowers are excellent for cutting. Its narrow leaves remain green in color throughout the season.

Landscape Attributes

Blue Leap Agapanthus is an herbaceous perennial with a rigidly upright and towering form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

Blue Leap Agapanthus is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Blue Leap Agapanthus will grow to be about 18 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 24 inches. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Blue Leap Agapanthus is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
