Dwarf Powderpuff

Calliandra emarginata

Height: 6 feet

Spread: 6 feet

Sunlight: ○ ◐

Hardiness Zone: 9

Other Names: Miniature Powderpuff

Description:

This is a dwarf, low growing evergreen shrub producing coppery pink new foliage that matures to dark green; pinkish-red powderpuff blooms in fall and winter, with some sporadic blooming year round; an interesting accent shrub

Ornamental Features

Dwarf Powderpuff features showy rose pincushion flowers with pink overtones along the branches from early fall to late winter. It has dark green evergreen foliage which emerges coppery-bronze in spring. The oval bipinnately compound leaves remain dark green throughout the winter.

Landscape Attributes

Dwarf Powderpuff is a multi-stemmed evergreen shrub with a mounded form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds and butterflies to your yard. It has no significant negative characteristics.

Dwarf Powderpuff is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Dwarf Powderpuff will grow to be about 6 feet tall at maturity, with a spread of 6 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America.

Dwarf Powderpuff makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
