Plant Height: 12 inches

Flower Height: 3 feet

Spread: 12 inches

Sunlight: ○ ◐

Hardiness Zone: 10

Description:

Beautiful rosettes of re-curved, silver-white leaves with large white spines on the edges; tubular, orange-yellow flowers rise on tall spikes when the plant matures, and are attractive to hummingbirds; requires little irrigation; thrives in extreme heat

Ornamental Features

White Dyckia has spikes of orange tubular flowers with yellow overtones rising above the foliage in early summer, which are interesting on close inspection. Its attractive twisted spiny leaves remain silver in color with pointy white spines and tinges of grayish green throughout the year.

Landscape Attributes

White Dyckia is an herbaceous evergreen perennial with a ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should never be pruned except to remove any dieback, as it tends not to take pruning well. It is a good choice for attracting hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

White Dyckia is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Planting & Growing

White Dyckia will grow to be about 12 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 12 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America. It can be propagated by division.

White Dyckia is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
