Height: 15 feet

Spread: 12 feet

Sunlight: ○ ◐

Hardiness Zone: 5

Description:

This handsome holly is suitable for use as a screen with its tidy, pyramidal habit; spectacular golden-yellow and green variegated foliage, and orange-red fruit in winter make this a great addition to the landscape

Ornamental Features

Golden Oakland Holly is primarily grown for its highly ornamental fruit. It features an abundance of magnificent orange berries with red blush from mid fall to mid winter. It has attractive yellow-variegated green foliage with hints of gold which emerges buttery yellow in spring. The spiny oval leaves are highly ornamental and remain green throughout the winter.

Landscape Attributes

Golden Oakland Holly is a dense multi-stemmed evergreen shrub with a distinctive and refined pyramidal form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds and bees to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Golden Oakland Holly is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- Naturalizing And Woodland Gardens

Planting & Growing

Golden Oakland Holly will grow to be about 15 feet tall at maturity, with a spread of 12 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is particular about its soil conditions, with a strong preference for rich, acidic soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
