Height: 3 feet

Spread: 24 inches

Spacing: 24 inches

Sunlight:

Hardiness Zone: (annual)

Other Names: Thai Pepper

Group/Class: Hot Thai

Description:

A fiery hot and stunning selection; 3" long fruit that emerges green and ripens to bright red; fruit can be harvested either green or red; commonly dried for hot pepper flakes, it is also great pickled or added to dishes for a spicy kick

Edible Qualities

Bangkok Hot Pepper is an annual vegetable plant that is commonly grown for its edible qualities, although it does have ornamental merits as well. It produces small green oblong peppers (which are technically 'berries') with red flesh which can be harvested at any point. The fruit will often fade to red over time. The peppers have a fiery taste and a crunchy texture.

The peppers are most often used in the following ways:

- Eating When Cooked/Prepared
- Cooking
- Pickling

Planting & Growing

Bangkok Hot Pepper will grow to be about 3 feet tall at maturity, with a spread of 24 inches. When planted in rows, individual plants should be spaced approximately 24 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Bangkok Hot Pepper is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
