Description:

A compact, high yielding variety, producing spicy mini peppers; emerging green and maturing to red, these bite sized beauties pack a punch; perfect for gardens, borders and patio containers; great for hot sauces, drying and pickling

Edible Qualities

Pikito Hot Pepper is an annual vegetable plant that is typically grown for its edible qualities, although it does have ornamental merits as well. It produces small light green narrow peppers (which are technically 'berries') which are typically harvested when mature. The fruit will often fade to red over time. The peppers have a spicy taste and a crisp texture.

The peppers are most often used in the following ways:

- Eating When Cooked/Prepared
- Cooking

Planting & Growing

Pikito Hot Pepper will grow to be about 24 inches tall at maturity, with a spread of 18 inches. When planted in rows, individual plants should be spaced approximately 18 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant is quite ornamental as well as edible, and is as much at home in a landscape or flower garden as it is in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Pikito Hot Pepper is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
