Height: 15 feet

Spread: 15 feet

Sunlight:

Hardiness Zone: 4

Description:

An attractive, bright golden-yellow apple with a pleasant, tart to sweet balanced flavor; keeps well, and is ideal for fresh eating, sauces, and juice; great for home landscapes, needs well-drained soil and full sun

Edible Qualities

Opal Apple is a small tree that is commonly grown for its edible qualities. It produces gold round apples (which are botanically known as 'pomes') with a rose blush and white flesh which are usually ready for picking from late summer to early fall. The apples have a tart taste with a firm texture and a sweet fragrance.

The apples are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Juice-Making
- Sauces

Features & Attributes

Opal Apple features showy clusters of lightly-scented white flowers with shell pink overtones along the branches in mid spring, which emerge from distinctive pink flower buds. It has forest green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy gold apples with a rose blush, which are carried in abundance in late summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Disease

Aside from its primary use as an edible, Opal Apple is sutiable for the following landscape applications;

- Accent
- Shade
- Orchard/Edible Landscaping

Planting & Growing

Opal Apple will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
