Height: 20 feet

Spread: 20 feet

Sunlight:

Hardiness Zone: 5

Description:

A medium sized tree featuring showy pale pink to white flowers in spring, followed by golden-orange fruit in mid-summer; needs full sun, well-drained soil; requires an early blooming pollinator to set fruit; susceptible to damaging late spring frosts

Edible Qualities

Rival Apricot is a small tree that is typically grown for its edible qualities. It produces large orange oval fruit (technically 'drupes') with a rose blush and orange flesh which are usually ready for picking in mid summer. Note that the fruits have hard inedible pits inside which must be removed before eating or processing. The fruits have a sweet taste and a firm texture.

The fruit are most often used in the following ways:

- Fresh Eating
- Baking
- Preserves
- Drying
- Canning
- Freezing

Features & Attributes

Rival Apricot is draped in stunning clusters of fragrant white flowers with shell pink overtones along the branches in early spring before the leaves. It has green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy orange drupes with a rose blush, which are carried in abundance in mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This plant will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Disease

Aside from its primary use as an edible, Rival Apricot is sutiable for the following landscape applications;

- Accent
- Shade
- Orchard/Edible Landscaping

Planting & Growing

Rival Apricot will grow to be about 20 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 50 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.
