Height: 15 feet

Spread: 15 feet

Sunlight:

Hardiness Zone: 5

Other Names: Plumcot

Description:

An inter-species, plum-apricot hybrid with showy fragrant white flowers in spring and sweet, light green fruit with maroon mottling in mid summer; great for eating fresh and preserves; freestone; must have a Japanese plum variety or hybrid as pollinator

Edible Qualities

Flavor Supreme Pluot is a small tree that is commonly grown for its edible qualities. It produces light green round fruit (technically 'drupes') mottled with burgundy and crimson flesh which are usually ready for picking from early to mid summer. Note that the fruits have hard inedible pits inside which must be removed before eating or processing. The fruits have a sweet taste and a firm texture.

The fruit are most often used in the following ways:

- Fresh Eating
- Preserves
- Canning

Features & Attributes

Flavor Supreme Pluot is clothed in stunning clusters of fragrant white flowers along the branches from early to mid spring before the leaves. It has forest green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy light green drupes mottled with burgundy, which are carried in abundance from early to mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This plant will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Disease

Aside from its primary use as an edible, Flavor Supreme Pluot is sutiable for the following landscape applications;

- Accent
- Orchard/Edible Landscaping

Planting & Growing

Flavor Supreme Pluot will grow to be about 15 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more. This variety requires a different selection of the same species growing nearby in order to set fruit.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
