Height: 18 inches

Spread: 8 inches

Spacing: 2 inches

Sunlight:

Hardiness Zone: (annual)

Description:

A perfect danvers type, great for any garden; produces 10" long ivory white carrots; well rounded, sweet flavor with a crisp texture, perfect for snacking, salads, roasting and any gourmet dish

Edible Qualities

White Satin Carrot is an annual vegetable plant that is commonly grown for its edible qualities. It produces large creamy white long roots with creamy white flesh which are harvested from mid summer to mid fall. The roots have a sweet taste and a crisp texture.

The roots are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Cooking
- Baking
- Freezing

Planting & Growing

White Satin Carrot will grow to be about 18 inches tall at maturity, with a spread of 8 inches. When planted in rows, individual plants should be spaced approximately 2 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop. Because of its relatively short time to maturity, it lends itself to a series of successive plantings each staggered by a week or two; this will prolong the effective harvest period.

This plant is typically grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
