Height: 12 inches

Spread: 5 feet

Spacing: 24 inches

Sunlight:

Hardiness Zone: (annual)

Description:

A beautiful compact leafy plant perfect for small gardens and containers; produces 5" long dark green cucumbers that are ideal for pickling; performs best when trellised and consistently harvested; can grow up to 55 cucumbers per plant

Edible Qualities

Fresh Pickles Cucumber is an annual vegetable plant that is typically grown for its edible qualities. It produces small dark green long cucumbers (which are technically 'berries') with white spines and light green flesh which can be harvested at any point. The cucumbers have a delicious taste and a crisp texture.

The cucumbers are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Pickling

Planting & Growing

Fresh Pickles Cucumber will grow to be about 12 inches tall at maturity, with a spread of 5 feet. When planted in rows, individual plants should be spaced approximately 24 inches apart. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant is typically grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America.

Fresh Pickles Cucumber is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing the canvas against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
