Height: 24 inches

Spread: 18 inches

Spacing: 24 inches

Sunlight:

Hardiness Zone: (annual)

Group/Class: Sweet Tapered

Description:

An excellent low maintenance and easy to grow variety that produces 8" long, tapered shaped peppers; emerging green and maturing to red; sweet red flesh, ideal for drying and grinding into seasonings; can also be eaten fresh in salads

Edible Qualities

Paprika Supreme Pepper is an annual vegetable plant that is typically grown for its edible qualities, although it does have ornamental merits as well. It produces green long peppers (which are technically 'berries') which are usually ready for picking from mid summer to early fall. The fruit will often fade to red over time. The peppers have a mild taste and a crisp texture.

The peppers are most often used in the following ways:

- Eating When Cooked/Prepared
- Cooking
- Drying
- Seasoning
- Sauces

Planting & Growing

Paprika Supreme Pepper will grow to be about 24 inches tall at maturity, with a spread of 18 inches. When planted in rows, individual plants should be spaced approximately 24 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America.

Paprika Supreme Pepper is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
