Height: 7 feet

Spread: 14 inches

Spacing: 12 inches

Sunlight: ○

Hardiness Zone: (annual)

Description:

A lovely selection that produces ears of corn that reach 8 inches long; golden kernels are tender and deliciously sweet; perfect for gardens or used as a natural screen in landscapes; ideal flavor for corn on the cob, corn salsas or salads

Edible Qualities

Vision Corn is an annual vegetable plant that is typically grown for its edible qualities, although it does have ornamental merits as well. It produces cobs of yellow long kernels with gold overtones which are typically harvested when mature. The kernels have an exceptionally sweet taste and a juicy texture.

The kernels are most often used in the following ways:

- Eating When Cooked/Prepared
- Cooking
- Baking
- Freezing

Planting & Growing

Vision Corn will grow to be about 7 feet tall at maturity, with a spread of 14 inches. When planted in rows, individual plants should be spaced approximately 12 inches apart. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
