Height: 8 inches

Spread: 30 inches

Spacing: 24 inches

Sunlight:

Hardiness Zone: 8

Description:

This variety is useful and beautiful at the front of a border, along the edge of a walkway or tucked into a rockery or wall crevices; also excellent for container plantings; striking pale yellow leaves with bright orange variegation really puts on a show

Ornamental Features

Orange Delight Coppertone Stonecrop has masses of beautiful clusters of lightly-scented white flowers at the ends of the stems from late winter to early spring, which are most effective when planted in groupings. Its attractive succulent round leaves remain buttery yellow in color with showy orange variegation and tinges of coppery-bronze throughout the season. The coral-pink stems are very colorful and add to the overall interest of the plant.

Landscape Attributes

Orange Delight Coppertone Stonecrop is a dense herbaceous perennial with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Orange Delight Coppertone Stonecrop is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover
- Container Planting

Planting & Growing

Orange Delight Coppertone Stonecrop will grow to be about 8 inches tall at maturity, with a spread of 30 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 24 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 15 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in poor soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Orange Delight Coppertone Stonecrop is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
