

Blue Halo Cape Primrose

Streptocarpus 'Blue Halo'

Plant Height: 8 inches

Flower Height: 12 inches

Spread: 15 inches

Sunlight: ◐ ●

Hardiness Zone: 9

Other Names: Nodding Violet

Description:

Dainty, airy lavender-blue flowers with buttery yellow centers rise above soft, medium green leaves on this lovely compact plant; an excellent tabletop accent that is easy to care for

Features & Attributes

Blue Halo Cape Primrose features dainty panicles of powder blue tubular flowers with lavender overtones and buttery yellow centers rising above the foliage from mid winter to late fall. Its tomentose oval leaves emerge light green, turning forest green in color throughout the year. The burgundy stems can be quite attractive and add to the plant's interest.

This is an herbaceous evergreen houseplant with a mounded form. Its relatively fine texture sets it apart from other indoor plants with less refined foliage. This plant may benefit from an occasional pruning to look its best.

Planting & Growing

When grown indoors, Blue Halo Cape Primrose can be expected to grow to be about 8 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 15 inches. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. This houseplant performs well in both bright or indirect sunlight and strong artificial light, and can therefore be situated in almost any well-lit room or location. It prefers to grow in average to moist soil. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It is not particular as to soil pH, but grows best in rich soil. Contact the store for specific recommendations on pre-mixed potting soil for this plant.

There are many factors that will affect the ultimate height, spread and overall performance of a plant when grown indoors; among them, the size of the pot it's growing in, the amount of light it receives, watering frequency, the pruning regimen and repotting schedule. Use the information described here as a guideline only; individual performance can and will vary. Please contact the store to speak with one of our experts if you are interested in further details concerning recommendations on pot size, watering, pruning, repotting, etc.
