Chironja Orangelo

Citrus 'Chironja'

Height: 8 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 9

Other Names: Citrus paradisi x sinensis

Description:

A hybrid selection believed to be a spontaneous cross of an orange and grapefruit; large, bright yellow, round to pear shaped fruit with orange flesh are sweet and easy to peel; a great container plant for the patio or bright indoor areas

Features & Attributes

Chironja Orangelo features showy clusters of fragrant white star-shaped flowers with buttery yellow eyes at the ends of the branches from late spring to early summer. Its crinkled oval leaves remain dark green in color throughout the year. The yellow oval fruit is edible and has a sweet taste with a juicy texture and a strong fragrance. Note that in general, it can be difficult to get plants to reliably produce fruit indoors; this may be a challenge best reserved for adventurous and experienced gardeners.

This is a multi-stemmed evergreen houseplant with an upright spreading habit of growth. This plant may benefit from an occasional pruning to look its best.

Planting & Growing

When grown indoors, Chironja Orangelo can be expected to grow to be about 8 feet tall at maturity, with a spread of 6 feet. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 50 years. This houseplant requires direct sun for optimal performance, and should therefore be situated in a room that gets bright sunlight for a good part of the day; it is not a good choice for rooms lit only by artificial light. It prefers to grow in average to moist soil. The surface of the soil shouldn't be allowed to dry out completely, and so you should expect to water this plant once and possibly even twice each week. Be aware that your particular watering schedule may vary depending on its location in the room, the pot size, plant size and other conditions; if in doubt, ask one of our experts in the store for advice. It is not particular as to soil type or pH; an average potting soil should work just fine.

There are many factors that will affect the ultimate height, spread and overall performance of a plant when grown indoors; among them, the size of the pot it's growing in, the amount of light it receives, watering frequency, the pruning regimen and repotting schedule. Use the information described here as a guideline only; individual performance can and will vary. Please contact the store to speak with one of our experts if you are interested in further details concerning recommendations on pot size, watering, pruning, repotting, etc.

-- THIS IS A HOUSEPLANT AND IS NOT MEANT TO SURVIVE THE WINTER OUTDOORS IN OUR CLIMATE --
