Seyval Blanc Grape

Vitis 'Seyval Blanc'

Height: 20 feet

Spread: 24 inches

Sunlight:

Hardiness Zone: 5

Other Names: Syn. Seival Grape, Seyval Grape

Group/Class: Hybrid Grape

Description:

A hybrid variety that produces clusters of light green-golden grapes; ripens early and is well suited for cooler climates; ideal for wine-making or preserves; use as a screen for arbors or winding along fences, requires regular pruning and full sun

Edible Qualities

Seyval Blanc Grape is a woody vine that is commonly grown for its edible qualities. It produces clusters of light green round fruit with gold overtones which are usually ready for picking in mid fall. The fruits have a sweet taste and a juicy texture.

The fruit are most often used in the following ways:

- Fresh Eating
- Preserves
- Juice-Making
- Wine-Making

Features & Attributes

Seyval Blanc Grape has rich green deciduous foliage on a plant with a spreading habit of growth. The lobed leaves turn yellow in fall. It produces abundant clusters of light green grapes with gold overtones in mid fall.

This is a dense multi-stemmed deciduous woody vine with a spreading, ground-hugging habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage. This is a high maintenance plant that will require regular care and upkeep, and requires a special pruning regimen to reliably produce fruit; consult a specific reference guide or contact the store for proper pruning techniques. It is a good choice for attracting birds and bees to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading
- Disease

Aside from its primary use as an edible, Seyval Blanc Grape is sutiable for the following landscape applications;

- Hedges/Screening
- General Garden Use
- Orchard/Edible Landscaping

Planting & Growing

Seyval Blanc Grape will grow to be about 20 feet tall at maturity, with a spread of 24 inches. As a climbing vine, it should be planted next to a fence, trellis or other rigid structure where it can be trained to grow upwards on it. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This woody vine is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
