Height: 18 inches

Spread: 30 inches

Sunlight: ◐

Hardiness Zone: 8

Description:

This outstanding compact selection is bathed in clusters of beautiful coral double blooms from late winter to early spring, and has loads of interest for the rest of the year; an excellent choice to mass in groupings as a focal point of the garden

Ornamental Features

Ripples Azalea is bathed in stunning clusters of double coral-pink trumpet-shaped flowers at the ends of the branches from late winter to early spring, which emerge from distinctive red flower buds. It has attractive dark green evergreen foliage which emerges light green in spring. The small glossy oval leaves are highly ornamental and remain dark green throughout the winter.

Landscape Attributes

Ripples Azalea is an open multi-stemmed evergreen shrub with a mounded form. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Ripples Azalea is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Ripples Azalea will grow to be about 18 inches tall at maturity, with a spread of 30 inches. It has a low canopy. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in a location that gets morning sunlight but is shaded from the hot afternoon sun, although it will also grow in partial shade. Keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It may require supplemental watering during periods of drought or extended heat. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.

Ripples Azalea makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the thriller plants stand out. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
